

Make a Super Sound Cone

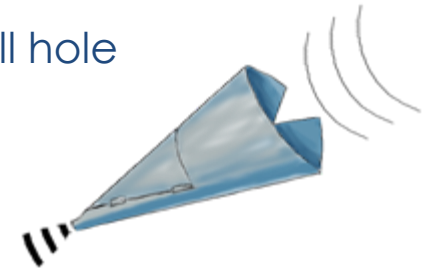

You need:

- A big piece of tag board or poster board, about 18 x 24 inches
- Transparent tape

What to do:

1. Roll the poster board into a cone shape, leaving a small hole (about 1/2 to 1 inch across) at the pointed end.
2. Leave the big end as wide as you can.
3. Tape the edge into position.

Outside 🤖

1. Take the cone outside.
2. Put the small end in your ear.
3. Point the cone in different directions and listen carefully.
4. Notice how different the world sounds with and without the cone to aid your hearing.
